NOVELTY ASSESSMENT REPORT

VOICE ACTIVITAED SONG PLAYER

PREPARED FOR	DATE	SEARCH ID
Test Analyst	**20/11/2025**	**cmi72xi3h000**

CONFIDENTIAL & PRIVILEGED

Executive Summary

NOVELTY SCORE	PATENTS ANALYZED	RISK LEVEL
0.0%	49	Moderate

This report analyzes 20 patents against the invention features. The analysis reveals significant overlap across many prior art documents concerning voice-controlled music search and playback. Key missing features across the analyzed patents include comprehensive text extraction from voice and detailed voice sample analysis. While several patents touch upon user request interpretation and song search, the integration of all specified invention features, particularly the combination of detailed voice sample analysis with robust text extraction for nuanced user request interpretation and seamless audio playback control, appears to be limited. The overall novelty assessment suggests a 'Not Novel' determination based on the current evidence, with a 'Medium' confidence level due to the scattered nature of feature implementation across the prior art.

Invention Scope

Search Query

```
Voice-controlled music player analyzes voice input for song requests, extracts text, searches for
matches, and plays selected audio.
```

Identified Technical Features

F1 Voice sample analysis

F2 Text extraction from voice

F3 Song search function

F4 Audio playback control

F5 User request interpretation

Key Strengths

- Broad coverage of voice-controlled music search and playback in prior art.
- Many patents demonstrate elements of user request interpretation and song search functionality.

Key Risks

No significant risks identified.

Strategic Recommendations

- Focus claim drafting on the synergistic integration of all five features, particularly emphasizing the technical details of text extraction from voice and voice sample analysis.
- Explore novel methods for analyzing voice samples beyond simple recognition for enhanced user request interpretation.
- Consider embodiments that leverage the extracted text and voice sample analysis for unique audio playback control mechanisms.

- User request...

FEATURE NOVELTY ANALYSIS

STRATEGIC RECOMMENDATIONS

- Focus claim drafting on the synergistic integration of all five features, particularly emphasizing the technical details of text extraction from voice and voice sample analysis.
- Explore novel methods for analyzing voice samples beyond simple recognition for enhanced user request interpretation.
- Consider embodiments that leverage the extracted text and voice sample analysis for unique audio playback control mechanisms.

RISK ASSESSMENT

No significant risks identified.
